

Introducing Mr & Mrs Pauric Keown

Some of the Donnybrook Farm Service team made the trip to Kununurra to help Brooke and Pauric (Reggie) celebrate their big day!

In true Brooke style everything was thought about and organised to a tee.

The ceremony was held on a nice grassed area at the rivers edge, making a picturesque back drop. A string quartet played as Brooke made her entrance escorted by a proud Dad, Cliff.

Reggie looking as handsome as Brooke did beautiful, accepted his bride. Formalities were completed with a mix of seriousness, laughter and the odd tear. Much needed cold refreshments were taken and followed by an enjoyable meal, music and dancing to finish off the celebrations.

Congratulations Brooke and Reggie, what a great time we had!

A REAL BUSINESSMAN

A clearly inebriated woman, stark naked, jumped into a taxi in New York City and laid down on the back seat.

The cab driver, an old Jewish gentleman, opened his eyes wide and stared at the woman. He made no attempt to start the cab. The woman glared back at him and said, "What's wrong with you, honey? - Haven't you ever seen a naked woman before?"

The old Jewish driver answered, "Let me tell you sumting, lady. I vasn't staring at you like you tink; that would not be proper for I come from."

The drunk woman giggled and responded, "Well, if you're not staring at my boobs or ass, sweetie, what are you doing then?"

He paused a moment, then told her..."Well, M'am, I am looking and I am looking, and I am thinking to myself, 'Where in da hell is dis lady keeping de money to pay for this ride?

Now, that's a REAL Businessman!

FRUIT FLY ARE COMNG

The time of the year is again upon us to think about controlling fruit fly. There is no effective cover spray to eradicate the Mediterrean fruit fly maggot once it is in the fruit. Being pro-active and starting preventative action is therefore the only way to control the pest. Quite an arsenal of traps, lures and baiting option have arrived on the market and if maintained through summer, fruit fly can be controlled.

Starting early is the key. The young flies emerge from the ground in October/November as the warm weather commences. If traps and bait are in place at this time, the first generation is eliminated prior to breeding therefore eliminating a bigger population.

One control option is Magnet Meds. They give six months control, which is the length of our fruit season. They look like a piece of white plastic, but are impregnated with a smelly lure that only a fruit fly could love and an eradicating chemical. Attracted by the smell, the fruit fly lands on the Magnet Med and the contact is sufficient to kill them.

Cera traps is the best solution for the home gardener. A lure attractant is placed in the container/trap and the fruit fly enters through holes. Unable to find the exit, they drown in the lure solution. So long as the lure is kept replenished they are very effective.

The final method is foliage baiting. A mixture of an attractant lure combined with a killing chemical is splashed onto the trees on a weekly basis. This is not a cover spray, but rather a course splash of droplets. On a small scale, the mixture can be applied as a flick from a paint brush. Commercial orchards can use a course stream through a jet the size of a match stick, applied from an ATV backpack tank unit is ideal. Done on a weekly basis very good control is attained.

We can talk you through the options. Speak to the friendly staff at Donnybrook Farm Service.
